SECURE DATA COLLECTION

Sensitive data deserves a form that can’t read it.

VerifID Forms is a no-code form builder that encrypts every response in the respondent's browser, before it reaches any server. Not even VerifID can read what you collect.

RSA-3072
+ AES-256 ENCRYPTION

Zero-knowledge
WE CAN'T READ YOUR DATA

Free trial
1 FORM · 50 RESPONSES

THE PROBLEM WITH ORDINARY FORMS

- Generic form tools store responses in a form their provider can read.
- A single breach, insider or subpoena exposes every identity document, medical record or financial detail you collected.
- Under DPDP and similar laws, you are accountable for that data, not the tool.

How VerifID Forms helps

Zero-knowledge encryption

RSA-3072 protects a per-form private key and AES-256 protects the data. The key is generated on your device and never reaches VerifID.

Your brand, not ours

Upload your logo and the form adopts your colours automatically. Clients see a form that looks like you.

Ready-made templates

Start from templates for KYC, onboarding, intake and reporting, with consent statements built in.

Embed anywhere

Drop an encrypted form on your own website with a copy-paste snippet, in your brand.

WHO IT'S FOR

Teams that collect personal, financial, health or confidential information: accountants, clinics, law firms, fintechs, HR and compliance teams.

ALIGNED WITH

DPDP ACT 2023 · GDPR · HIPAA · E2E ENCRYPTED

VerifID Forms is built to support DPDP, GDPR and HIPAA-aligned data handling. Compliance also depends on your own policies and processes; this brochure is not legal advice. Because of the zero-knowledge design, a lost private key cannot be recovered by VerifID. Current plans and pricing: verifidforms.com/pricing.
