PRODUCT BROCHURE

Collect sensitive data. Without handing anyone the keys.

VerifID Forms is a no-code, end-to-end encrypted form builder. Every response is encrypted in the respondent's browser, so not even VerifID can read it.

RSA-3072
+ AES-256 ENCRYPTION

Zero-knowledge
WE CAN'T READ YOUR DATA

1 FORM · 50 RESPONSES

HOW IT WORKS

From form to encrypted response in five steps

1

Choose or build a form

Start from a ready-made template or build your own with no code.

2

Brand it

Upload your logo; colours are picked up automatically.

3

Share the link

Respondents fill it in from any browser.

4

Responses arrive encrypted

Each answer is locked in the respondent's browser before it is sent.

5

Only you can open them

Your private key decrypts responses, on your device. VerifID cannot.

> **Why it matters.** With ordinary form tools, the provider stores responses in a form it can read. A breach, an insider or a legal demand can expose everything you collected. With zero-knowledge encryption, there is nothing readable for them to expose.

The security model, in plain terms

- **RSA-3072** protects a unique key for each form; **AES-256** encrypts the response data itself.
- The private key is **generated in your browser** and never sent to VerifID servers.
- Every uploaded file is encrypted in the browser with its own **AES-256** key before it is stored.

WHAT YOU CAN DO WITH IT

Templates for regulated, real-world work

KYC & customer onboarding

White-label KYC forms for fintechs, NBFCs and advisers.

GST & vendor verification

GSTIN, PAN, signatory and bank details collected securely.

Healthcare intake

Patient histories and consent forms, encrypted so only the practice can read them.

Whistleblower reporting

Confidential, encrypted reporting for vigil-mechanism needs.

Startup & incubator applications

Pitch decks and cap tables kept confidential.

Client document collection

PAN, financials and supporting files for CA and CS practices.

Available today

- White-label branding with automatic palette from your logo
- 46 industry preset themes
- Embed forms on your own website
- Decrypted CSV and Excel export, on your device
- Location field for field visits and site checks
- Ready-made templates for KYC, GST and onboarding

EARLY ACCESS

Switched on per account, in small batches

- **Payments inside the form.** Take a fee, deposit or donation through Cashfree (UPI, cards, netbanking), settled to your bank. Activated after Cashfree verifies your business.
- **Submission notifications and webhooks.** Know the moment a client submits. Signed webhooks carry metadata only, never the answers.

BUILT TO SUPPORT

DPDP ACT 2023 · GDPR · HIPAA · KYC / AML

QUESTIONS

Frequently asked

Is there a free trial?

Yes: 1 form, 50 responses and full encryption, with no payment details needed.

Can VerifID Forms read our responses?

No. Responses are encrypted in the respondent's browser to a key that only you hold. The private key is generated on your side and never reaches VerifID servers.

What happens if we lose the private key?

It cannot be recovered, by design; the same property keeps your data safe from everyone else. Keep the key file somewhere safe, such as a password manager.

Does it make us DPDP, GDPR or HIPAA compliant?

It gives you strong technical safeguards at the point of collection: end-to-end encryption and verifiable erasure. Compliance also depends on your own policies and processes.

What does it cost?

Plans and any current offers are listed at verifidforms.com/pricing.
